

ClanChat

Complete Product Specification — v4.0

Your Personal Clubhouse

Confidential · Feb 2026 · clanchat.app

ClanChat is a privacy-first social platform built around one idea: **an online version of chilling with your homies**. Not a stage. Not a broadcast channel. Your personal clubhouse — where you decide who gets in, what they see, and how they can reach you.

Legend — implementation status

Marker	Meaning
■	Built and live on preview + prod
■	Built but hidden / feature-flagged / partial coverage
■	Planned for the next phase — not built
■	New in v4 — added since v3 spec was written

Concept	An online version of chilling with your homies
Tagline	ClanChat – Your Personal Clubhouse
Domain	clanchat.app (<i>deployed</i>)
Handles	# format — not @ ()
Build Tool	Emergent.sh → Cursor (Phase 2) — code on GitHub ()
Authentication	Email/password + Google social login (Supabase-backed) (<i>Supabase swap</i>)
Backend	FastAPI + MongoDB + Supabase Storage (<i>Supabase Storage swap</i>)
Status	V1 shipped · Iter 23 · Feb 2026
Version	v4.0 — Complete specification with implementation status

1. Vision & Identity

Concept. ClanChat is built around one idea: an online version of chilling with your homies. Every feature serves one goal — authentic connection with people you actually trust. Not a performance. Not a broadcast. Your personal clubhouse.

Tagline. ClanChat — Your Personal Clubhouse ()

Core Philosophy - Privacy by architecture, not policy - No algorithm. No ads in your personal feed. No toxic metrics. - Adults can be adults — but kids are always protected by architecture not just policy - Your circle. Your rules. No bullshit. - Transparency is non-negotiable — especially around AI generated content - Every feature serves authentic connection, not engagement farming - ClanChat is not anti-AI — AI is creative and welcome. Transparency and consent are mandatory. - Deliberately the opposite of Instagram, Facebook, and TikTok - The responsible adult social network — fun without exploitation

The "My" Language Pattern (*applied throughout the UI*) - My Feed · My Choices (*P2*) · My Comfort Zone · My Inner Circle · My Wall

Tone of Voice () - Warm, casual, no corporate speak · direct and honest · never robotic · treats users like adults · direct call-out for bad behaviour

Handle Format. ClanChat uses # not @ . You are #YourName . ()

Real Name Policy () - Held for internal verification and safety only — never public by default - Visibility settings: Nobody / Inner Circle / All Followers / Everyone - Changeable anytime in settings

Anti-Meta Positioning (*all*)

Instagram / Facebook / TikTok	ClanChat
Algorithmic feed	Chronological only
Ads everywhere	No ads in personal feed
Public follower counts	All metrics private
Anyone can DM you	DMs gated by tier
Open follow by default	Privacy first by default
Adult content poorly managed	Strictly tiered + verified
Kids poorly protected	Minor protection by architecture
Screenshot anything	Screenshot protection in DMs (Android · web/iOS unavoidable)
AI content unlabelled	All AI content mandatory labelled

2. The Three Tiers

The three-tier system is the core architecture of ClanChat. No exceptions. **All live.**

Tier	Name	Who Sees It	How You Get In
1	Public	Anyone — account or no account	No barrier
2	Followers	Approved followers only	Open follow or approval required
3	Inner Circle	Your closest chosen people only	YOU send the invite. Nobody can request it.

- Tier 1 — Public** - Visible to anyone with an account (no logged-out view yet — P2) - No DMs from this level — ever - No 18+ content — hardcoded, no exceptions - No tagging without approval · anonymous likes · Tier 1 boards read-only for no-account viewers - Tags fully searchable
- Tier 2 — Followers** - Two follow modes: Open / Approval Required () - Can participate in your Discussion Boards () - Optional DMs toggle () - 18+ content visible if account flagged & follower age-verified (client-side NSFW toggle; age verification P2) - Tag thumbnails with follow prompt to non-followers (P2 — Choices dependent) - Temporary preview on pending follow requests (P2)
- Tier 3 — Inner Circle** - Invite-only — you send invites () - Can comment on regular posts (— comments Tier 3 gated) - DMs always open () - Group chats · max 15 · consent-based joining () - Per-person controls (DMs / audio msg / audio call / video call) () - No tag field on Tier 3 posts () - **The Invisible Wall** — Tier 3 posts do not exist to Tier 1 & 2 ()

Interaction Matrix (enforced server-side)

Action	No Account	Tier 1	Tier 2	Tier 3
Read Tier 1 posts				
Read Tier 2 posts	×	×		
See Tier 3 posts	×	×	×	
Like posts	×	T1 only		
Comment	×	×	Boards	
DM the account	×	×	If toggle	Always
Wall write	×	×	If setting	If setting
Group chats	×	×	×	With consent

Search Visibility — Hardcoded ()

Searcher	Can Find
Adult → adult	
Adult → minor	Invisible
Minor → clean adult	
Minor → 18+ adult	Invisible
No account	Account required

Wall Settings () - Default: owner only · openable to Inner Circle / Followers · non-followers can never post

3. Profile & Identity

Profile Layout (current: PP · #handle · display name · real name (tiered) · bio · links · Shop "coming soon" placeholder · tabs)

Tabs (current build) (restructured from v3) - **Media** · **Wall** · **Audio** · **Boards** (inside Wall) · **Pinned ribbon** above tabs - v3 had 5 tabs (Feed / Wall / Audio / Boards / Pinned); v4 collapsed to 3 for mobile density with Pinned as a ribbon and Boards nested inside Wall.

Profile Picture Rules (SFW-only enforced by client scan · human review queue for reports)

Bio — Std 150 · Prem 300 · Verified 300 (std 150; tiered limits P2)

Links Section — Std 3 · Prem 8 · Verified unlimited (std 3; tiered limits P2)

Profile Tabs by Account Type

Tab	Standard	Premium	Verified
Feed / Media			
Wall			
Audio			
Boards			
Pinned	3	6	6
Music tab	—	—	P3
Shop tab	×	external	native

Private Metrics (all private: follower count owner-only, likes anonymous, no play counts exposed, no algorithm)

Tagging Controls (*Anyone/Followers/Inner/Nobody*; approval mode ; 18+ tags always approval ; photo/video tags manual approval ; Tier 3 no tag field)

4. Content & Posting

Post Types (all) - Text · Photos · Videos · Audio · Discussion Boards - Tier selector at post time ()

File Size Limits

File	Std	Prem	Verified
Photos	50MB	Unlimited	Unlimited
Videos	500MB / 10min	2GB / unlim	4GB / unlim
Audio	100MB / 30min	1GB	Unlimited
Documents	100MB	2GB	2GB

All media cloud-stored (Supabase Storage, bucket `ClanChatApp`) (*was Emergent Storage in v3*)

18+ Content Rules () - Accounts can be flagged 18+ · warning before follow · T2/T3 only · individual post NSFW flag · Tier 1 always clean · Veriff for upload P2

Discussion Boards () - Any user creates boards · T2 follow to join · T3 always · T1 read w/ account · board creator moderates

Commenting Rules () - Regular posts: T3 only · Boards: T2+ · Non-followers → only T1 boards

Audio Posts () - Owner-only posting · no audio comments/wall · audio DMs via per-person toggle · waveform player (*basic*; *scrubbing/speed*) · Music tab P3 · pre-release model P3

5. Tag System

How Tags Work () - Field bottom of post (hidden on T3) · space/comma → chip · tap chip to remove · max 10 · lowercase · single word · visible below content

Tag Visibility by Tier ()

Tier	Field	Search	Non-follower preview
T1			Full post
T2			Preview P2
T3	Hidden	Never	Invisible

Banned Tags (`hardcoded`, applies to usernames, display names, wall, board titles too; fuzzy-match 133tspeak `P2`) - Racial · homophobic · transphobic · antisemitic · Islamophobic · ableist · sexist slurs · silent-fail (no error msg)

Follow Prompt Discovery (`P2` — Choices-dependent)

6. Messaging & Calls

DM Access by Tier ()

Tier	DM Access
T1	No DMs. Ever.
T2	Optional toggle
T3	Always open
Verified receiving DMs	<code>P2</code> (off by default, thread-scoped reply)

Per-Person Inner Circle Controls (— set on invite, adjustable later) - DMs · audio messages · audio calls · video calls

Read Receipts (on for everyone)

Group Chats (`T3` only · max 15 · everyone accepts · silent decline · silent leave · owner can remove)

Encryption (`v4` state) - **Server-side AES-256-GCM** on all DMs today (live) — `content_enc` column in Mongo - Signal Protocol full E2E — `P2`

Voice & Video Calls (`v3` said "WebRTC `P2`" — we shipped it in `V1` via LiveKit Cloud) - Voice · Video · IncomingCallRinger · in-call screen - Native Android earpiece audio routing plugin (`CallAudioPlugin.java` shipped, awaiting on-device test)

Screenshot Protection () - Android `FLAG_SECURE` via native `PrivacyScreen` plugin (per-thread) - X Web/iOS — platform-impossible, honest banner shown

7. Safety & Moderation

Block / Mute / Restrict / Remove Follower (all four)

Report System () - Categories: csam, underage, harassment, hate, self_harm, inappropriate, unlabelled_ai, impersonation, spam, other - Anonymous reporter · human review · admin queue

Soft Warning (before any strike — polite auto-message)

3 Strike System ()

Stage	Action
Soft Warning	Message only
Strike 1	24-48h suspension · specific reason
Strike 2	7d suspension · final warning
Strike 3	Permanent deletion · no appeal

- Strike count visible in own settings · specific reason every time · expiry after 12mo clean
- ban-evasion device/IP flag P2

Immediate Strike 1 + 48h ban (policy defined, admin-triggered) - AI of real person no consent · impersonation · doxxing · unlabelled AI confirmed

Immediate Strike 3 — permanent (policy defined) - AI sexual content of real person · NCII · doxxing severe · credible threats

CSAM — Law Enforcement Matter (fully wired v1) - Auto-quarantine on CSAM report (immediate) - Separate csam_reports collection - Admin CSAM queue + audit log - CEOP_ENDPOINT env plumbing built - Live CEOP/NCMEC submission (blocked on ClanChat Ltd registration)

Minor Protection — Hardcoded (all live) - DOB at signup · 18+ warning · T1 NSFW block · 18+ tag approval · minors invisible to adults · 18+ invisible to minors

Adult → Minor Contact Rules — Hardcoded (all live) - Adults cannot follow / DM / invite to IC minors unless minor initiates · not in follower suggestions · UK Online Safety Act aligned

Human Support Response Times (policy defined; support flow P2)

Account Type	Time	Handler
Std free	72h	Support team
Premium	48h	Priority queue
Verified	24h	Founding team
Verified major	Same day	Founder personally
Urgent CSAM/threat	1-2h	Immediate escalation

Verified Account Conduct Policy (policy defined · enforcement P2)

8. AI Content Policy

ClanChat's Position (*AI welcome · transparency + consent mandatory*)

Detection System - V1 *manual toggle on upload* - *Client-side nsfwjs scanner for image*
NSFW moderation (shipped this session) - *P2 Hive Moderation API for full AI detection*

Mandatory Labelling (*label required to upload; options: AI Generated / AI Assisted / AI Altered; permanent label on post*)

The Friendly Reminder (*P2 — requires Hive detection first*)

AI of Real People — Hard Rules (*policy · admin-enforced today · Hive automation P2*)

AI Sexual Content of Real People — Nuclear (*policy · admin-enforced today*)

Viewer Controls (*AI toggle in Comfort Zone — "off" = completely gone from feed*)

9. Age Verification & Minor Protection

Basic Signup — Worldwide () - *Email · DOB (self-declared V1) · email confirm · minor flag auto-applied · Google social login*

Viewing NSFW Content () - *Comfort Zone NSFW toggle (client + server) - P2: Yoti for UK/EU/AU · COPPA DOB for US · IP-based routing*

Uploading NSFW Content (*P2 — Veriff worldwide gate*)

Under 18 Full Signup Restrictions (*all live*) - *Cannot enable NSFW · cannot see 18+ · cannot see AI of real people Hive · invisible to adults · adults cannot initiate*

10. Comfort Zone

Onboarding message (*OnboardingTour: "Before you enter the clubhouse let us set up your space"*)

Comfort Zone Settings (*all wired · minor override blocks are hardcoded*)

Setting	Default	Notes
NSFW content	Off	Age verification required · minor block
Graphic violence	Off	P2 UI toggle
Strong language	On	P2 UI toggle
Sensitive topics	Off	P2 UI toggle
AI generated content	On	toggle live
Anonymous accounts	On	P2 UI toggle

11. Choices & Discovery (*all Phase 2*)

Choices is ClanChat's opt-in discovery layer — completely separate from My Feed. Tag driven. Public facing. Where sponsored content lives (the only place ads ever appear).

- Categories · tag driven feed · sponsored posts · Choices opt-out toggle · initial categories list
- v4 stopgap: TrendingRail (right sidebar at 2x1+) shows top 10 public tags last 24h — mini-Choices ()

12. Verified Accounts & Celebrities (*Phase 2*)

Who can apply, shield colours, handle claim process, verified features vs standard, verified DM rules, inner circle pre-release model, direct access to founding team — all as v3 spec. **Deferred per user directive: "Shields can wait."**

13. Creator Tools & Live Streaming

Creator Tools — Verified (P2) - Analytics · scheduling · multi-upload · priority uploads · extended bio · pinned · custom themes · Music tab · native shop

Live Streaming (promoted to P2 per user · was Phase 3 in v3) - Standard live · gaming live w/ screen capture · tier-gated streams · Inner Circle live · in-stream chat with tier rules - RTMP/HLS ingest + LiveKit (already integrated for calls — reuse!)

Live Stream Monetisation (P2) — live tips · super comments · Inner Circle-gated exclusive streams

Audio & Music Features — Verified (P3) — Music tab · chronological tracks · anonymous likes · share link · Choices integration · audio pre-release · high-res for IC

14. Shop & Merch

Shop Access by Account Type

Account Type	Shop Access
Standard	No shop · placeholder "coming soon"
Premium	External link P2
Verified	Full native store P2/P3

Phase 2 — External Store Links () - Shopify · own website · Amazon · Simple Shop button · 0% cut

Phase 2/3 — Native ClanChat Store (— *user promoted from P3 to earlier*) - In-app merch store · creator uploads products · fan purchases in-app · **ClanChat handles payments end-to-end via Stripe + Xsolla + IOMoney** (payment routing per region) - **ClanChat cut: 7.5% of each transaction** (down from v3's stated 5-10%, aligned with tips rate) - Printful integration for print-on-demand · zero inventory risk

What Can Be Sold (as v3) - Physical merch · digital downloads · behind-the-scenes packs · signed digital prints · meet-and-greet tickets · IC-exclusive merch (unique)

Tier System Applied to Merch (as v3) - Public store · Followers exclusive drops · IC exclusive ultra-limited

Transparency on Shop Transactions (as v3) - Every txn shown · ClanChat cut in £ · creator net · payout dates · zero hidden fees

15. Premium Subscription

Premium Features vs Free vs Verified (policy defined P2 · Premium checkout not yet built)

Feature	Free	Premium	Verified
Photos	50MB	Unlimited	Unlimited
Videos	500MB / 10min	2GB / unlim	4GB / unlim
Audio	100MB / 30min	1GB	Unlimited
Pinned	3	6	6
Bio	150	300	300
Links	3	8	Unlim
Themes	Default dark	Custom	Custom
Scheduling	×		
Analytics	Basic	Advanced	Full
Support	72h	48h	24h
Badge	None	Premium	Shield
Read receipts			
Animated PP	×	P2	P2
Shop	×	External link	Native

Premium Never Includes — boosted reach · algorithm priority · ads · unfair social advantage.

Premium Pricing — £3–£5/month TBC · **ClanChat keeps 100% of Premium revenue** (platform sub, no creator involved).

16. Monetisation & Payment Structure (*UPDATED v4*)

Per-Stream Platform Fee

Flat, transparent, written into terms. **All below not yet wired — payments integration is next up on the roadmap.**

Revenue Stream	v4 ClanChat Cut	Creator Gets	Notes
Tier 3 subscriptions (paid Inner Circle)	10%	90%	Creator sets monthly price (v3 was 5%)
Tips from followers	7.5%	92.5%	One-off direct payments (v3 was 5%)
Merch sales — native store	7.5%	92.5%	Native store · Printful fulfilment (v3 was 5-10%)
Digital downloads	7.5%	92.5%	Music, art, content packs (aligned with tips)
Live stream tips	7.5%	92.5%	Phase 2
Super comments (live)	7.5%	92.5%	Phase 2
Sponsored posts	Revenue share	Majority	Choices feed only — never My Feed
ClanChat Premium	100%	N/A	Platform subscription — no creator involved
External store links	0%	100%	Just a link, no transaction

Payment Rails (v4 architecture)

Regional routing so creators + fans get the best conversion:

Region	Primary	Fallback
UK / EU / US / AU / rest of world	Stripe	—
Russia / CIS	IOMoney (YooMoney)	—
In-game / gaming / global microtransactions	Xsolla	—

- All three rails feed the same **creator earnings dashboard** — transparency is universal.
- Region auto-detected from IP + user profile; fans can override.
- Payouts scheduled per creator in their local currency.

Advertising Rules — Absolute (*unchanged from v3*)

- Sponsored posts ONLY in Choices — never in My Feed
- Category-scoped · always visibly labelled · creator account required · no banners · no pop-ups · no injected ads

Creator Transparency Dashboard (P2)

- Monthly earnings broken down · per-stream breakdown · ClanChat's cut in exact £ · creator net · full payout history · scheduled dates · zero hidden fees

Paid Inner Circle Subscriptions (P2)

- **ClanChat cut: 10%** · creator keeps 90%
- Creator sets own price · fan subscribes · access auto-granted
- Free and paid slots coexist in same IC - paying subs never know who's free · access removed on cancel

Why Creators Will Choose ClanChat

- Keep 90–92.5% of everything earned (subs slightly higher fee than v3; tips + merch competitive)
- Inner Circle pre-release built in · no algorithm suppression · direct fan relationships
- Merch / subs / tips / sponsored / downloads all in one platform · Stripe + Xsolla + iOMoney routing
- Privacy first · direct line to founding team · a platform that respects creators

17. Design & UX

Dark Mode by Default (*true-black OLED-friendly · optional light mode toggle in settings*)

Colour System (*all live*)

Colour	Use
True black	Base layer
Purple #7c3aed	Inner Circle · verification accents
Orange #FF5A00	Primary CTA (Post/Send/Follow)
Green #10b981	Public tier
Amber #f59e0b	Followers tier

Navigation () - **Bottom nav (mobile)** — Feed · Search · Messages · Activity · Profile - **Desktop sidebar (lg+)** — full nav + brand + user chip + New Post CTA (v3 didn't specify desktop) - **Trending rail (2xl+)** — right sidebar with top 10 public tags last 24h

Feed Display (*v4 enhancements*) - **General ▾ / Followers scope selector** at top of feed (X-style · default: General) - Words / Gallery toggle · chronological · no algorithm · no suggested posts - Post shows: tier · #handle · timestamp · content · anonymous like count - **Gallery tap opens fullscreen Lightbox** with author footer + "Go to profile" pill

Cloud Based Infrastructure (Supabase Storage · Telegram-style device-independent · web primary · Android APK via Capacitor · Russia-accessible via Hetzner-style hosting on Emergent Cloud)

18. Company & Legal Structure (*unchanged from v3 · all pending*)

Company registration · dual-class shares · decision-making structure · IP protection · legal docs required before launch · recommended legal services (Seedlegals, Companies House, UKIPO) · estimated legal setup costs £1,050–£1,800.

19. Financial Structure (*unchanged from v3 · pending Ltd formation*)

- Each founder ×6 : 15% each = 90% total
 - Company reserve : 10%
 - Total : 100%
 - 10% reserve for infra · legal · Yoti/Veriff · emergency · reinvestment · marketing · hiring
-

20. Build Phases

Phase 1 — V1 MVP: SHIPPED · Feb 2026

All V1 items from v3 spec complete: - Email/password + Google social login (Supabase) - DOB + hardcoded minor flag - # handle system throughout - Three-tier system with server-side enforcement - Invisible Tier 3 posts - Follow (open + approval) · Inner Circle invite-only - Profile layout (Media/Wall/Audio tabs + Pinned ribbon) - 3-pinned hard limit - Private metrics - Chronological feed (Words/Gallery) - Photo/video/audio uploads · manual AI toggle - Tags · 10 max · banned words · tier rules - DMs · tier-gated · per-person IC controls - Block · mute · remove follower · restrict - Anonymous report system · human review - 3-strike moderation with soft warning - Adult → minor contact protection hardcoded - Minor search invisibility hardcoded - Dark mode default + light toggle - Bottom nav (Feed · Search · Messages · Activity · Profile) - Comfort Zone (basic + hardcoded minor NSFW block) - Search by #handle - Discussion Boards - Admin panel — reports queue · CSAM queue · audit log · strike 1/2/3 · dismiss - CEOP pipeline scaffolding (env plumbed, live submission pending Ltd)

Phase 1.5 — Beyond V1 spec, delivered before P2:

- **Voice & video calls (LiveKit)** — v3 said P2, shipped in V1
- **Server-side AES-256-GCM DM encryption** — interim before Signal Protocol
- **Group chats** (T3, ≤15, consent, silent leave)
- **Chronological activity feed** — likes / comments / follows / invites / tags
- **Editing** — posts, wall notes, DMs (with `edited` badge + edit history)
- **Voice notes** — inline `<VoiceRecorder />` in DMs + Audio posts
- **Giphy stickers/GIFs** — proxied through backend to keep API key server-side
- **Client-side NSFW image scanner** — `nsfwjs`
- **Screenshot block (Android)** — `FLAG_SECURE` via PrivacyScreen plugin
- **Push notifications (FCM)** — likes / comments / follows / DMs / group msgs / warnings
- **Capacitor Android APK** — self-contained build via GitHub Actions
- **Native Android CallAudioPlugin.java** — earpiece routing for LiveKit
- **Android back-button handler** — double-tap-to-exit on /feed, nav-to-feed elsewhere
- **Gallery deep-link** — thumb → Lightbox with author footer + "Go to profile"
- **Activity deep-link** — notification tap → scroll + highlight + open comments
- **Feed scope selector** — General / Followers (X-style)
- **PWA** — manifest, installable, branded SVG icon, service worker
- **SEO/OG/Twitter Card meta**
- **TrendingRail** — top 10 public tags last 24h (mini-Choices)
- **Onboarding tour** — 4-step, Esc/backdrop/button dismissible
- **Desktop sidebar** at lg+
- **Deployment to production** at `clanchat.app`

Phase 2 — Post-V1 Stabilisation

- Choices / Discovery feed — tag-driven, separate from My Feed
- Full NSFW system — Yoti (viewing) · Veriff (uploading) — **deferred until ClanChat Ltd registered**
- **Creator monetisation** — the big one:
 - **Stripe** (UK/EU/US/AU/RoW)
 - **Xsolla** (in-app / gaming)
 - **ЮMoney** (Russia/CIS)
 - Paid Inner Circle subscriptions (**10%** platform fee)
 - Tips (**7.5%** platform fee)
 - Merch native store + Printful (**7.5%** platform fee)
 - Digital downloads · sponsored posts
 - Creator transparency dashboard
- **Live streaming** (promoted from v3 P3 per user directive)
- RTMP/HLS ingest · LiveKit reuse · tier-gated · IC-only exclusive streams
- Live tips · super comments

- Signal Protocol E2E DM upgrade (replaces server-side AES)
- Verified account system — applications · shield colours · handle claim
- Post scheduling · advanced analytics · custom themes · animated profile pictures
- External store links (Premium)
- Hive Moderation API (replaces manual AI label)
- Ban-evasion device/IP flagging
- Full CEOP/NCMEC live submission pipeline

Phase 3 — Growth & Scale

- App Store / Play Store listings with full safety documentation
- iOS native build (Capacitor)
- Verified Music tab · pre-release audio model
- Advanced AI detection updates
- International trademark expansion
- Moderation team hiring
- Dedicated verified support team
- Regional server infrastructure expansion

21. Tech Stack & Infrastructure

Current Build — V1 shipped

- **Frontend:** React 18 · Tailwind · shadcn/ui · Lucide icons · sonner toasts · Radix primitives · React Router
- **Backend:** FastAPI · Python 3.11 · Motor (Mongo async) · Pydantic
- **Database:** MongoDB
- **Auth + Storage:** Supabase (email/password + Google OAuth · Storage bucket `ClanChatApp` · SDK pinned to `2.45.4`) — *(v3 said Emergent Auth + Emergent Storage — swapped)*
- **Calls:** LiveKit Cloud
- **Push:** Firebase Cloud Messaging (FCM only — Firebase Auth removed)
- **Stickers:** Giphy API (backend-proxied)
- **AI moderation (client):** nsfwjs
- **Encryption (DMs):** AES-256-GCM server-side (interim before Signal Protocol)
- **Native shell:** Capacitor · GitHub Actions APK build
- **Code:** exported to GitHub · always own your code

Future — Cursor Phase (*unchanged from v3*)

- React/Next.js · Supabase full-stack · TypeScript · Tailwind · Signal Protocol

Hosting (current: Emergent Cloud · Russia-accessible)

- Emergent Cloud (managed) · Russia-accessible without VPN · no Cloudflare
- Migration option: Hetzner (Finland/Germany) if needed
- HTTPS enforced · domain `clanchat.app` deployed

Third Party Integrations Status

Integration	Phase	Purpose	Status
Supabase Auth + Storage	V1	Auth + file storage	
LiveKit Cloud	V1	Voice + video calls	promoted from P2
Firebase Cloud Messaging	V1	Push notifications	
Giphy	V1	Stickers / GIFs (proxied)	
nsfwjs (client)	V1	Client-side image scan	
Capacitor + native plugins	V1	Android APK · earpiece · FLAG_SECURE	
CEOP pipeline	V1	CSAM law-enforcement handoff	scaffolded · live
Hive Moderation	P2	Real AI content detection	
Yoti	P2	Age verification for NSFW viewing	
Veriff	P2	ID verification for NSFW uploaders	
Signal Protocol	P2	Full E2E DMs / groups	
Stripe	P2	Payments (UK/EU/US/AU/RoW)	
Xsolla	P2	In-app / gaming microtxns	
YooMoney (YooMoney)	P2	Payments Russia/CIS	
Printful	P2/P3	Print-on-demand merch	
WebRTC (via LiveKit)	shipped V1	Audio + video calls	

22. Cursor Build Prompt

(unchanged from v3 — retained verbatim as reference for a future Cursor rebuild)

23. What's Been Built (delta from v3 spec)

This section captures features that either weren't in the v3 spec at all, or were slated for a later phase and got pulled forward.

Delivered ahead of schedule (v3 said Phase 2/3 · shipped in V1)

- Voice + video calls (LiveKit)
- Push notifications (FCM)
- Screenshot protection on Android (per-thread FLAG_SECURE)
- Capacitor Android APK build with GitHub Actions
- Editing (posts / wall / DMs)
- Server-side encrypted DMs (AES-256-GCM interim)
- Discussion Boards with tier moderation
- Group chats with consent-based joining
- Comprehensive admin panel (Reports · CSAM · Audit log)

Not in v3 at all — added because we needed them

- Chronological Activity feed (likes / comments / follows / invites / tags / warnings)
- Voice notes (inline `<VoiceRecorder />` recording, 60s max, WebM opus)
- Giphy stickers/GIFs (backend-proxied)
- Client-side NSFW image scanner (`nsfwjs`)
- Native Android earpiece audio routing plugin (`CallAudioPlugin.java`)
- Gallery → Lightbox deep-link with author "Go to profile" footer
- Feed scope selector (General ▾ / Followers)
- Notification → post scroll+highlight deep-link
- Android back-button double-tap-to-exit
- TrendingRail (mini-Choices) at 2xl+ desktop
- Desktop sidebar layout
- Onboarding tour
- PWA support (manifest + service worker)
- SEO / OG / Twitter Card meta

Tech stack changes from v3

- **Supabase** replaces Emergent Auth + Emergent Storage
- **LiveKit Cloud** replaces "WebRTC someday"
- **FCM** for push (Firebase Auth removed)
- **AES-256-GCM** interim server-side DM encryption before Signal Protocol
- **nsfwjs client** for image moderation before Hive

Monetisation deltas (v4 vs v3)

- v3: flat **5%** on everything
- v4: **10% subs** · **7.5% tips** · **7.5% merch (native store)** · **7.5% digital / live tips / super comments**
- ◦ Three payment rails: **Stripe + Xsolla + IOMoney** (was Stripe-implied only in v3)
- ◦ **Live streaming promoted from P3 → P2**

Deferred per user directive

- Verified account shields ("Shields can wait")
- Yoti / Veriff age verification (until ClanChat Ltd registered)
- CEOP live pipeline (scaffolded, awaiting Ltd)
- iOS Capacitor build

ClanChat Complete Product Specification **v4.0** · Confidential · Feb 2026 · clanchat.app Built by the founder. All rights reserved. ClanChat Ltd (in formation).

Creator Support System

Product Spec Addendum — Conduct, Upheld Reports & Escalation Ladder

ClanChat operates a transparent, progressive enforcement system based on **upheld reports** (reports reviewed and confirmed as violations by moderation). Escalation is cumulative across the lifetime of an account. The ladder below governs restrictions applied to creators and standard accounts alike.

Escalation Ladder

Upheld reports	Action taken
1	Automated reminder: “Please be mindful of your conduct. Continued violations may result in restrictions.”
3	Internal “Creator Safety” flag. Creators see: “This account has a history of upheld harassment or abusive behaviour. Please exercise caution.”
5	7-day suspension + mandatory re-acceptance of the rules, with a warning of harsher punishments to follow.
7	30-day suspension from the app + final warning.
10	Permanent ban.

Rehabilitation & Appeals

- **12 months of good behaviour** (no new upheld reports) entitles an account to **appeal to have strikes removed**, resetting their standing.

Zero-Tolerance (Automatic Termination, No Appeal)

Upheld reports involving **threats, violence, or recurring targeted harassment** (and comparable severe conduct) result in **automatic account termination with no ability to appeal**. This bypasses the progressive ladder entirely.

Note: This system complements ClanChat’s existing moderation tooling (reports queue, strikes, flags, watchlist and silent investigations). “Upheld report” counts are tracked per account and surfaced to moderators.
